

BEARINGS INC. A member of the Thomson-Gordon Group

After Sales Service Technician

Thordon Bearings is a family owned business with our head office in Burlington, Ontario with satellite offices in the UK, Russia, Chile, Hong Kong and the United States. Thordon is the world leader in the design and manufacture of environmentally friendly rudder and stern tube bearing systems for ships and industrial applications.

We are looking for an individual to join our After-sales Service Department. As part of the team you will respond to our customer's technical requirements while you are in the field and in the office with assistance in design, product installations, commissioning, modifications, repair and maintenance.

The job consists of two components. The first is field consultation at the customer's location investigating problems and offering solutions. Your customers can vary from large oil tanker owners to workboat owners with service locations around the world. The second component is writing of attendance reports, customer follow-up, on-going troubleshooting and system improvements while in our head office.

We are looking for a self-starter with a technical background in Naval Architecture or Marine Engineering plus an understanding of the commercial issues relating to ship operations. You will be our representative to, and point of contact for, our customers.

We are offering a great learning experience, work environment, attractive compensation plus benefits and global travel.

If you are interested in the position, please contact:
